

FOR IMMEDIATE RELEASE
September 16, 2014

Strategic improvements being made to Franklin County's water and sewer system

Today, Commissioners approved two investments totaling just over \$619,000 to improve Franklin County's aged water and sanitary sewer systems. The agreements enable the County to acquire professional engineering services for two projects which include valve replacements for Sanitary District 4 and upgrades to the Oakhurst Knolls Wastewater Treatment Plant. The services rendered under the agreements will allow the County to ensure continued delivery of high quality service to residents as well as maintain important environmental safeguards.
