President

Department of Sanitary Engineering
Stephen A. Renner, Director

Fall, 2016

Dear Owner/Resident:

The Franklin County Board of Commissioners (BOC) and Department of Sanitary Engineering (FCSE) are pleased to announce that work is resuming to complete the sewer systems in the Mon-E-Bak and Brown Road East areas. We have assembled a team of professionals to rectify past deficiencies and move the projects forward to successful completion without further delay. The purpose of this effort is to provide public infrastructure so that near-failing or failed septic systems can be abandoned and water quality can be improved.

The BOC and FCSE have contracted with Elite Excavating of Ohio, Inc. for construction and Stantec Consulting Services, Inc., an independent inspection firm, to provide oversight and ensure all work meets regulatory and environmental requirements. Preliminary work begins in mid-September 2016 with construction starting in late October. Construction is expected to be completed by June 2017. There will be some related restoration work to be completed by August 2017. These dates may be subject to change due to elements beyond control, such as weather.

Additionally, we understand the project delays and past issues have caused frustration. We are committed to maintaining a high level of customer service throughout upcoming construction. Construction can generate noise, dust and temporary detours. We ask for your patience and urge you to call the **project update hotline at 614-525-4751** for weekly updates. Updates to each project will be posted on Mondays. You can call to leave a message with questions or concerns at any time. The hotline will be checked daily. Please leave your name, street address, phone number and concern so a representative can get back to you within one business day.

Temporary road closure or detour information will be available on Paving the Way's website: <http://pavingtheway.org>. Project area maps and preliminary information regarding how to connect with the new sewer system will soon be available at <http://cleanwater.franklincountyohio.gov/>. Once the project is complete, FCSE will schedule a public meeting to detail the entire connection process. There will be assistance available to qualified owners and a one year deadline for connection from the meeting date.

We share your desire to have a safe, effective sewer system serving your neighborhoods. We apologize for the delays and appreciate your cooperation in helping us complete this worthwhile project.

Respectfully,

K. Marie Strandwitz (Doklovic), PE
Project Manager
